

Clean and Green

By Cecily Hastings

Land Park resident **Angela Arthur** wants your home to be both clean *and* green. Arthur operates **California Green Clean** to provide residential cleaning services that are safer for the homeowner and their loved ones, and safer for the environment.

"We are unique and special by the way we apply our belief that cleaning a home should be both safe for our clients and their families, and safe for the environment," explains Arthur, formerly a recreation manager.

"Typical cleaning products have been proven to be harmful to human health and destructive to our environment."

Angela Arthur's company, California Green Clean, provides residential cleaning services that are safer for both the homeowner and the environment

Many environmentally friendly cleaning products are available

"Typical cleaning products have been proven to be harmful to human health and destructive to our environment," she says. "All of our cleaning products are Green Seal Certified, or meet their strict criteria with no carcinogens, no toxins, and low to no VOCs."

"Our goal is to clean our client's home without leaving behind harmful toxic residues," Arthur says. "In addition, we use four filtration vacuums that remove the

tiniest dust mites—down to .03 microns—and micro-fiber cloths. Plus our housekeepers are trained in green cleaning methods."

Arthur says she was inspired to start the business because of her growing awareness about the impact her everyday choices were having on the environment. She also is concerned with the unexplained increases in illnesses, coupled with science that strongly suggests that environmental effects are strongly

linked with chronic, life-threatening and fatal illnesses.

"It is great joy to meet folks who are enlightened on the toxins present in our environment," she says. "I love that they want to be proactive in reducing these toxins from their homes."
